STUDIO VALENTINA

30 AI PROMPTS FOR ARCHITECTURE

Free Pack · Copy, paste, adapt

Written for real project phases — not generic productivity advice.
Edition 2026

From the Built Intelligence newsletter · studio-valentina.com

HOW TO USE THIS PACK

A prompt is a brief. Write it like one.

01

Role + context

"You are an architect working on a 2,400 sq ft single-family home in Fayette County, Georgia."

02

Task + format

"Give me 5 options, as a table, with a trade-off for each."

03

Limits

"If you are not certain about a code requirement, say so and tell me where to verify it."

Replace everything in **[brackets]** with your project. The more specific the bracket, the better the answer.
Verify every number, code reference and product before it reaches a drawing or a client.

01 · 08 BRIEF, PROGRAM & CONCEPT

Getting from the call to a program.

01 **Turn these client notes into a room program with square footages and adjacencies.**
Paste the notes. Ask for a bubble-diagram description too.

02 **List the 10 questions I should have asked this client and didn't.**
Best prompt in the pack. Run it after every first meeting.

03 **Summarize this zoning text for a [lot size] lot in [county]: setbacks, height, coverage, parking.**
Paste the ordinance. Then confirm with the planning office.

04 **Give me 5 massing strategies for a [slope / orientation] lot, with pros and cons.**
Ask for them as a table so you can compare quickly.

05 **Act as the client and push back on this design decision: [decision].**
Rehearse the meeting before the meeting.

06 **Suggest 6 precedent projects for [program] in a [climate] climate and what to steal from each.**
Verify the projects exist before you cite them.

07 **Write a one-paragraph design concept from these three words: [word, word, word].**
Then rewrite it in the client's own vocabulary.

08 **Critique this plan as a building official, a contractor and the client — separately.**
Three readers, three different lists of problems.

09 · 16 DOCUMENTATION & TECHNICAL

The writing nobody wants to do.

09 **Draft a specification section for [assembly] in CSI format, flagging anything I must confirm.**
Never send it without a product-data check.

10 **Write an RFI asking the engineer about [ambiguity], short and neutral.**
Include drawing number and date in the brackets.

11 **Turn this punch list into a table by trade, with priority and responsible party.**
Paste the raw walkthrough notes.

12 **List the general notes a residential permit set in [jurisdiction] usually includes.**
A starting checklist, not a legal answer.

13 **Review this door schedule for inconsistencies in sizes, ratings and hardware.**
Paste the schedule exported from Revit.

14 **Explain this code section to me as if I were the contractor on site.**
Comprehension aid — the code text still rules.

15 **Write a change-order description and justification for [scope change].**
Neutral tone, no admission of fault.

16 **Draft a Dynamo or Revit workflow to [repetitive task], step by step.**
Test on a copy of the model first.

17 · 24 CLIENTS, PROPOSALS & STUDIO

The part they don't teach in school.

17 **Rewrite this technical paragraph for a client with no construction background.**
Ask for a Spanish version in the same message.

18 **Draft a scope-of-services section for [phase], listing exclusions clearly.**
Exclusions are where disputes start.

19 **Write a weekly project update email: progress, decisions needed, what I need from you.**
Three headings, under 200 words.

20 **The client wants [request] outside the agreed scope. Draft a kind, firm reply.**
Offer the path, not just the no.

21 **Build me a phase-by-phase fee breakdown for a [size] residential project.**
A structure to fill in — not a market price.

22 **List the risks in this contract clause from the designer's side: [clause].**
Then take the real ones to an attorney.

23 **Turn this project into a 6-slide case study: problem, constraint, move, result.**
Portfolio and LinkedIn in one pass.

24 **Give me 10 post ideas about [topic] for an architecture audience, with a hook each.**
Write them yourself after; the voice must be yours.

25 · 30 IMAGES, RENDERS & MOODBOARDS

Prompts for the visual tools.

25 **Interior of a [room], [style], [material] floors, [time of day] light, 35 mm, eye level, photographic.**
Lens and height matter more than adjectives.

26 **Same room, three material directions: warm oak, pale plaster, dark stone.**
Change one variable at a time to compare honestly.

27 **Render this massing model in [style], keeping the geometry exactly as it is.**
For Veras or Enscape AI, from your real model.

28 **Describe the atmosphere of this reference image in words I can reuse as a prompt.**
Image in, vocabulary out. Build your own prompt library.

29 **Give me a 5-color palette with HEX codes for [feeling], plus the materials that match.**
Drops straight into the moodboard template.

30 **Write the caption that explains this render to a client without overselling it.**
Always label AI-assisted imagery as such.

Keep the prompts that work in one document. That file becomes your studio's standard faster than any tool subscription.

NEXT STEPS

Keep going.

01

AI for Architects

The playbook behind these prompts: where AI belongs in a real project.

02

Software Stack

Which program for what, and the order to learn them in.
